

Pegasus

Pegasus is bred for yield, disease tolerance and adaptability. It is a 115CRM medium to tall leafy plant.

With large bright yellow kernels, this hybrid is a true 'dual purpose' that finds a fit with both silage and grain growers in Australia but will have a silage focus for the New Zealand market. Characterised by a large cob, the hybrid has a dent x flint grain. Pegasus grain is of medium density, perfect for feed grain or high quality silage.

Planting population

90,000 to 100,000 seeds/ha (GRAIN 75-100K)

 <p>Plant type: 115CRM silage or grain</p>	 <p>Yield potential: Excellent yields with a strong disease package.</p>
 <p>Plant height: Medium to tall leafy plant with large bright yellow kernels.</p>	 <p>Grain type: Dent x Flint. Large cobs of medium density grains. Perfect for feed grain or high quality silage.</p>

Trait scores

General comments: High stress tolerance enables this variety to hold on when the growing gets tough.
