Testimonials

Megalac

Why do you use Megalac?

66 **We add 3.5% Megalac to our seasonal blend to assist with herd fertility. Because we calve three times a year, Megalac helps with our in-calf rates.**

✓ **Results**

Since using Megalac in the herds' feed, we have seen improved submission rates and very strong heats. We only mate for four weeks in Autumn, six weeks in spring, and a further four weeks in January. Even with the challenging weather conditions over the last two seasons, we have still seen improvements in the in-calf rates.
